

Advanced Echocardiography

presented by June Boon

September 9th and 10th of September 2019 Anatomiegebouw, Utrecht

This course is intended for veterinarians already experienced in echocardiography and competent in two dimensional (from left and right side) imaging, Doppler and M-mode scanning, who wish to broaden their spectrum on more uncommon echocardiographic features.

The course will cover lectures and case presentations on atypical congenital and acquired heart diseases as well as common therapeutical options in heart diseases in the dog and the cat and recent studies.

The participants will rotate in small groups of 4-5 participants in hands-on sessions through different stations with experienced instructors where individual coaching of how to obtain echocardiographic views and measurements taught in lectures is the main focus. A great opportunity to pick up the techniques of a basic echocardiographic examination in a one-on-one situation

Course Date: **September 9th of 2019** **08:45 – 17:30 followed by borrel**
 September 10th of 2019 **08:30 – 17:00**
